

THAYER
POWER & COMMUNICATION

Building Better Connections

Founded in 1964, Thayer Power & Communication Line Construction Co., LLC has established itself as one of the premier contractors in the Telecommunications and Power industries.

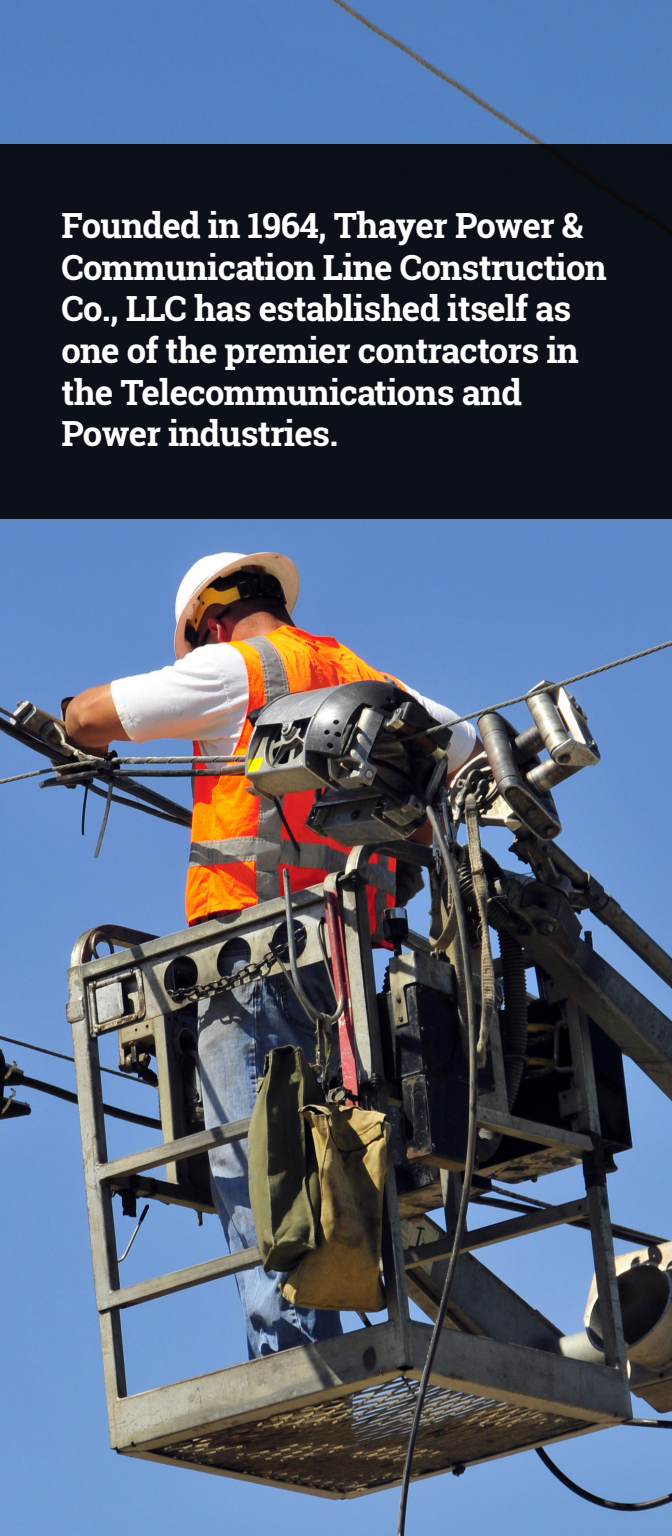

Partnering in Your Future

Trust Thayer to bring a robust network to your community or business. Our expertise in providing private networks to municipalities, communities and private business results in solutions that can:

- Reduce operational costs by eliminating high monthly data and telephone bills
- Drastically increase bandwidth and speed
- Create a community network for businesses, schools, and residential use
- Encourage competitive offerings from carriers by providing an open network by which they can extend services at a lower cost and lease your fiber

Thayer offers operational services for the network, 24/7/365 support and maintenance, and revenue sharing back to your bottom line. All services offered are done using our own in-house staff, ensuring that you are dealing directly with Thayer employees.

We look forward to being partners in your future!

Offering a Complete Turnkey Solution

By aligning our company with other industry experts, we can provide you with a total turnkey solution that includes:

- Survey & analysis
- Grant writing
- Contract negotiations with anchor institutions
- Permitting & joint use contracts with utility companies
- Engineering
- Construction
- Testing
- Turn up

Creating a Path for your Network

Telecommunications

- Engineering
- Planning & scheduling
- Feasibility studies & financial projections
- Installation, splicing & testing of network components
- Aerial & underground construction
- Fiber
- Facility upgrades
- Project management
- Subcontract review & supervision
- Start-up & testing
- Service & maintenance
- Staff augmentation
- System integration
- Small cell
- DAS systems

Power

- Distribution
- Transmission
- Substations
- Emergency restoration
- Power make-ready
- Primary meter customer maintenance
- Street lights & traffic control
- Industrial construction
- Renewable energy

People: The Cornerstone of our Business

The most important element of our organization is our people. Providing competitive wages and benefits to our technicians was a top priority of the founding members, and this still holds true. Offering one of the best employment packages in the industry today, Thayer attracts some of the finest technicians in the business.

Providing a Safe and Productive Workforce

Continual training in safety and best industry practices allows us to provide a safe and productive workforce to the utility industry on a daily basis. With an average DART Rate of 1.71 and an average Experience Modifier Rate (EMR) of .667, our company's safety record is solid. And with more than 100 years of combined experience in our construction management team, you can rest easy knowing Thayer will take your project from concept to reality while meeting quality and timeframe expectations.

Thayer Through the Years

Thayer Power and Communication Line Construction Co., LLC, was established in 1964 to service the electrical utility industry. Building and maintaining distribution voltages of 4KV and up was the primary objective at that time.

Around 1968, the telecommunications industry called on our organization to place poles and run copper cable to replace the many miles of open wire at that time. When Fiber Optic technology was perfected, Thayer was one of the first companies to begin constructing it in 1986.

As time marched on and technology evolved, the founding members set a goal to service all utilities. The plan was simple: Make Thayer the one-stop shop for outside engineering and construction services. Our in-house electrical and communication departments work together with any two utilities involved in a project to ensure a clean build from start to finish—placing the pole, transferring the electric and communications, and then removing the old pole. This results in a finished project that meets all NEC requirements, and leaves no old poles in the field.
